Unilock Paver Calculator Newsletter

Calculations Now Made Easy!

What you should have before getting started:

- **Have a Rough Sketch of Your Design**
—Have your design drawn or sketched so you can visually see the entire scope of the project. This will make measuring and calculations easier.
- **Have an Idea of the Product**
—With the varying dimensions of each product knowing which one you're going to use will make calculation a lot simpler.
- **Think About Borders & Accents**
—Borders and accents are a great addition to your project. These can create great visual appeal by combining varying colors and textures.

This newsletter to inform you of a new feature on Unilock's website. Unilock has developed an easy to use calculator to determine how much product you would need for your job: driveway, patio, walkway and pool decks.

Once you visit the www.unilock.com website and familiarize yourself with the products and patterns for your project, you

must set your location and then click on the product calculator at the top of the page to get started.

You will be asked to decide between two modes. **Step-By-Step Mode**, recommended for first time users and **Advanced Mode**, for experienced landscape professionals who are already familiar with estimating a landscaping project using Unilock products.

The Advanced Mode has 6 steps to determine your calculations.

1. Select a product.
2. Chose a laying pattern.
3. Area & measurements.
4. Add borders and banding.
5. Add circles.
6. Additional items: base gravel thickness in inches, bedding sand in inches and edge restraints.

Unilock makes calculations easy!
